Master Program

This program provides an advanced academic training in evaluation and management of health risks considering the One Health approach. One Health recognizes that the health of humans, animals and ecosystems are interconnected. InterRisk trains future risk managers from real cases problem-solving, which gives them a genuine practical experience. Six diseases (rabies, Japanese encephalitis, leptospirosis, cysticercosis, antibiotic resistance and influenza) are used as examples in each module in order to study them extensively from different perspectives. InterRisk program allows students to connect themselves to an international and cross-sectorial network of professionals.

Courses will take place at the Veterinary Faculty of Kasetsart University, Bangkok, Thailand. All teachings will be performed in English.

International Double Diploma:
- Toulouse University (France)
- Kasetsart University (Thailand)

Active learning

Practical works: laboratory experiments for disease diagnostics...

Computer-based problem solving: data analysis, biostatistics and epidemiology...

Field visits: biosecurity audits on livestock production units, outbreaks investigation...

Career

Wide range of career opportunities, at national and international level in public health, veterinary health, environment and ecology.

In research institutes, NGOs, governmental, and international organizations, where professionals are involved in the implementation and management of health programs.

Some InterRisk degree graduates may engage beyond in a PhD program.

Lecturers

Courses will be delivered by professors and researchers from Kasetsart University, Toulouse National Veterinary School, CIRAD and by various professionals from organizations involved in cross-sectorial approaches of health issues in SEA.
Entry requirements

Non-English native speakers or whose academic study was not exclusively in English must prove English proficiency by providing either official test of English as a foreign language (“TOEFL”) or International English Language Testing System (“IELTS”) or Test of English for International Communication (“TOEIC”) scores. An official report of the scores under two (2) years old should be provided.

For the full Master program (M1 & M2)
Admission of bachelor degree in the following disciplines: economics, social or political sciences, medicine, pharmacy, biology, veterinary medicine, engineering, agronomy, ecology and environmental sciences.

For direct admission in second year (M2)
Direct admission in M2 is open to holders of a M1 level. Students having a DM or DVM or Diploma of basic education in Veterinary Medicine, South-East Asian students from FETP-FETPV, outstanding performances in a bachelor curriculum in public health and related sciences or advanced experience in public health (up to 5 years) may be admitted in M2 depending on the steering committee decision.
